SYNOPSIS

This course requires students to consider the role of accounting in conveying an organisation's economic and social performance. Students will be required to learn about the Australian Conceptual Framework Project and be able to critically assess its usefulness and logic. A number of specific accounting standards will be studied and students will be required to understand the mechanics of applying the standards; the consistency of particular standards in relation to the reporting/measurement requirements embodied within other standards and the Conceptual Framework; and related empirical research which considers the economic and/or social implications that might result from the implementation of the particular standards. On completing the course, students should have knowledge of a large proportion of the accounting and reporting requirements that pertain to single business entities.

OBJECTIVES

Completion of this course should enable students to:

- demonstrate a knowledge of the 'regulatory' environment within which accounting procedures and reporting practices operate;
- demonstrate a knowledge of various theories of accounting, both of a positive and normative nature;
- demonstrate a knowledge of the conceptual framework's element definition and recognition rules and be able to critically assess the application of these within the context of various accounting standards;
- process a series of transactions and prepare financial reports consistent with a number of specific financial accounting standards;
- link the recording and reporting requirements of the standards covered in this course with the tentative findings of empirical accounting research.
