SYNOPSIS

This course builds on the knowledge acquired in studying Accounting for Decision-Making (or Introduction to Financial Accounting) and Accounting Information Systems. It is also recommended that students have successfully completed FIN1101 Business Finance I, given that concepts such as the time-value of money (present and future values) are now utilised in accounting standards. This course requires students to consider the role of accounting in conveying information about an organisation's financial performance. Students will be required to learn about the Australian Conceptual Framework Project and be able to critically assess its usefulness and logic. A number of specific accounting standards will be studied and students will be required to understand the mechanics of applying the standards; the consistency of particular standards in relation to the reporting/measurement requirements embodied within other standards and the Conceptual Framework; and, the related empirical research which considers the economic and/or social implications that may result from the implementation of the particular standards. On completing the course students should be knowledgeable of many of the accounting and reporting requirements that pertain to business entities.

OBJECTIVES

On completion of this course students will be able to:

- demonstrate a knowledge of the regulatory environment within which accounting procedures and reporting practices operate.

- demonstrate a knowledge of the conceptual frameworks element definition and recognition rules and be able to critically assess the application of these within the context of accounting standards on assets (intangibles); liabilities (leases) and revenues (long term construction contracts).
- process a series of transactions and prepare financial reports consistent with a number of specific financial disclosure standards (Cash Flow; Foreign Transactions; Goodwill; Leases; Long Term Construction Contracts; Statement of Financial Performance).
- link the recording and reporting requirements of the standards covered in this course with the findings of empirical accounting research.
