### OTHER-REQUISITES

Pre-requisite: Associate level membership or above, of the National Institute of Accountants.

### SYNOPSIS

This course requires students to consider the role of accounting in conveying an organisation's economic and social performance. Students will be required to learn about the Australian Conceptual Framework Project and be able to critically assess its usefulness and logic. A number of specific accounting standards will be studied and students will be required to understand the mechanics of applying the standards; the consistency of particular standards in relation to the reporting/measurement requirements embodied within other standards and the Conceptual Framework; and related empirical research which considers the economic and/or social implications that might result from the implementation of the particular standards. On completing the course, students should have knowledge of a large proportion of the accounting and reporting requirements that pertain to single business entities.

### OBJECTIVES

On successful completion of this course students will be able to:

- demonstrate a knowledge of the regulatory environment within which accounting procedures and reporting practices operate.
- demonstrate a knowledge of the conceptual frameworks element definition and recognition rules and be able to critically assess the application of these within the context of accounting standards on assets (intangibles); liabilities (leases) and revenues (long term construction contracts).
- process a series of transactions and prepare financial reports consistent with a number of specific financial disclosure standards (Cash Flow; Foreign Transactions; Goodwill; Leases; Long Term Construction Contracts; Statement of Financial Performance).
- link the recording and reporting requirements of the standards covered in this course with the findings of empirical accounting research.
