SYNOPSIS

This course focuses on the provision and use of management accounting information for planning, control and decision making. The course encourages an understanding of the management accounting function within an organisation by taking a business value chain perspective. The process of budgeting (operational and financial) and standards as an aid to management in planning and controlling business activities is explored. Also included is an analysis of cost behaviour, absorption and variable costing, a study of the principles of job and process costing systems, the application of activity based costing, as well as other facets of management accounting which support decision making.

OBJECTIVES

Completion of this course should enable students to:

- understand the role of management accounting in the management process;
- analyse cost behaviour and cost-volume-profit relationships;
- understand the issues and techniques associated with cost allocation generally and activity based costing principles and techniques in particular;
- accumulate costs for (and determine the costs of) products/services in job and process cost environments;
- prepare operating and financial budgets and appreciate behavioural factors associated with budgeting;
- guide the development of standard costs and compute variances for management control reports;
- understand variable and absorption costing principles, and prepare income statements in accordance with those principles; and

- determine and analyse relevant information for management decision making.
