### RATIONALE

Due diligence responsibilities, driven by ethics, environmental stewardship values, global imperatives and statute legislation are forcing new thinking and creative problem solving by managers in competitive edge firms, in government and the not for profit sector, and in the defence services. There is a growing commitment to preventing losses occasioned by environmental mismanagement and to halting the mortality and morbidity occasioned by environmental pollution and trauma. Standards are called up in legislation and these must be met. Countries are taking steps to stop the importation of pollution and sickness by writing standard contracts containing clauses to handicap products manufactured by environmentally faulty processes. This subject aims to introduce managers to environmental stewardship thinking, and to the worldwide environmental market and the opportunities and obligations therein.

### SYNOPSIS

This subject introduces managers to environmental stewardship and environmental management. Topics covered may include, inter alia, corporate environmental strategy, environmental policy and regulation, investing in environmental business, case studies in the application of pollution prevention to industrial facilities, convention updates, and global environmental markets. Formerly MGT8010.
