RATIONALE

Modern schools are becoming increasingly complex social environments as the forces of change impact on families, economics, technology, culture, roles of government and workplace reform. Influences such as globalisation, information technology development, increased social and cultural diversity, shifting patterns of wealth and disadvantage, and the ongoing explosion of knowledge demand a response from educational institutions. Young people are being challenged to live with complexity, uncertainty and diversity more so in current times than ever before. Diversity in the student population comes in many forms and encompasses cultural and linguistic differences, varying abilities, aptitudes and interests, differences in social and economic resources, family structures, values and aspirations. Beginning career educators require engagement with learning contexts that promote diversity as a valuable resource for learning and that enable the development of process skills, attitudes and knowledge essential in the reflective and responsive practitioner.
