

## A - Course and program mapping

The Course and Program Mapping Project is designed to allow USQ to create a program focus through program development, planning, and importantly the development of a course and program management system. This system is designed to allow faculties to map elements, such as graduate qualities and skills across their programs, linking these with course objectives and assessment items, and their outcomes. The system will also allow for a standardisation of referencing styles across the universities' programs, and has a strong emphasis on aligning course and program evaluations with a process of continuous improvement. A further aspect of this project is the development of a Student ePortfolio system that will provide a further link for students to their program with a view to preparing them for their profession.
