

## D - Technology enhanced learning and flexible delivery

The Technology Enhanced and Flexible Delivery Project will see USQ develop a new framework for the provision of flexible, high quality courses materials and programs support. Making up this project are new initiative to do with Flexi mode, the roll-out of the Integrated Content Environment ICE, the further development of the USQ*StudyDesk* and the Moodle Learning Management system, and the introduction of Virtual Classrooms. USQ is not a lone ranger with many of these types of initiatives, so we will be benchmarking much of what we are planning to do with other like institutions, using the ACODE (Australasian Council on Open Distance and e-Learning) Benchmarking Guidelines.
