

C – Vertical integration project

The Vertical Integration Project is very much focused on the student learning journey. It aims to provide learning support equitably and efficiently across all campuses, both on shore, off shore and across all modes and levels of enrolment. It does this by the integration of developmental strategies to support students in their efforts to improve their learning and by providing clear pathways for students to supplementary academic advice and resources. This project also is looking to embed a range of strategies into a Program focused curriculum, such as, Indigenous and international perspectives, Work-based Learning and Community Engagement.
