SYNOPSIS
This course focuses on the provision and use of information in decision making. The course encourages an understanding of the management accounting role within an organisation by taking a business value chain perspective. The process of budgeting (operational and financial) and performance measurement as an aid to management in planning and controlling business activities is reviewed. Also included is a study of the principles of Job and Process Costing systems, the application of activity based costing, the analysis of cost behaviour, as well as various other facets of accounting which support management decision making.

OBJECTIVES
Completion of this course should enable students to:

- understand the role of management accounting in the management process;
- analyse cost behaviour and cost-volume-profit relationships;
- understand the issues and techniques associated with cost allocation generally and activity based costing principles and techniques in particular;
- accumulate costs for (and determine the costs of) products/services in job and process cost environments;
- prepare operating and financial budgets and appreciate behavioural factors associated with budgeting;
- guide the development of standard costs and compute variances for management control reports;
- understand variable and absorption costing principles, and prepare income statements in accordance with those principles; and
- determine and analyse relevant information for management decision making.
