RATIONALE
The recent global communication infrastructure has compelled modern organizations to develop new paradigms of business transactions and relationships. Although the digital economies have produced many successful businesses they have also produced spectacular failures. It is critical for today's managers of information technology to be able to understand the principles and issues of electronic business so as to take full advantage of these global opportunities.

SYNOPSIS
The aim of this course is to teach the student the basic concepts of electronic business and enable students to develop skills to enable them to think strategically about electronic business. In order to complete this course, students must have Internet access.

OBJECTIVES
On successful completion of this course, a student will be able to formulate coherent and sensible E-Business strategies by meeting the following objectives:

- analyse the opportunities and barriers that exist in current business situations to enable the way organizations do business using the Internet as a information, communication, distribution and transaction medium;
- apply marketing principles to electronic business systems;
- understand the process of planning and implementation of Internet-based technologies;
- demonstrate a knowledge of the basic components of electronic business such as the world wide web, electronic payment systems, electronic funds transfer and network security mechanisms;
• appreciate the legal, ethical and taxation issues that emerge from the use of these technologies;
• have an understanding of the direction of government policy and future trends in electronic business.
