**Academic Group:** FOART

**Academic Org:** FOA004

**HECS Band:** 1

**ASCED Code:** 100700

**STAFFING**

Examiner: Julianne Stewart

Moderator: Bruce Horsfield

**SYNOPSIS**

This subject enables students to pursue a guided individual project in an issue, problem or question in a chosen aspect of e-healthcare covered in previous subjects, relevant where possible to the student's professional health care situation or needs. Project topics can be a research activity, analysis, report or exercise and can address technological, socio-technical, financial, medical, clinical communication, cultural, administrative or policy issues, problems or questions - but usually not more than one of these. Project topics should be presented as a one-page summary to the examiner and approved prior to their commencement, and each stage of project development should be approved by the examiner. Projects should be limited to the duration of the subject and should be submitted as a written, or substantially written, assignment. Students wishing to submit assignments that are computer software programs or similar should consult the examiner as early as possible for project approval.

**OBJECTIVES**

On successful completion of this course students will be able to:

- Initiate, design, develop and complete an individual project in a selected aspect of health communication systems implementation relevant to their professional and/or educational needs.
- Demonstrate a sound knowledge of their chosen project topic.
- Apply and justify appropriate methodology to an independent project.
- Demonstrate scholarly familiarity with the literature and professional reading relevant to their chosen project topic.
REFERENCE MATERIALS

Reference materials are materials that, if accessed by students, may improve their knowledge and understanding of the material in the course and enrich their learning experience.
