Examiner: Lenore Lindbeck
Moderator: Anne Petriwskyj

RATIONALE
During the years from birth to eight the child's total development is progressing at its fastest rate. At the same time there are significant differences between children in these rates and in the quality of development. Professionals who work with children must be highly competent in recognising developmental changes and must have a repertoire of responses to these changes.

SYNOPSIS
This course is an in-depth study of the growth and development of children between the ages of birth to eight years. Students will acquire observation/research skills through guided observation activities working with children aged birth to eight years. There will be a strong emphasis on the physical, cognitive and affective (social-emotional) development of young children.

OBJECTIVES
On completion of this course students should be able to:

- demonstrate knowledge of the major states and features of development in children
- identify children's development and learning through the application of observation/research techniques
- apply knowledge gained from observations and research to the study of children.

**NOTES:**

Further details about the due dates will be determined when the examination timetable is completed.

**OTHER REQUIREMENTS**

1. Summative assessment items will be given a numerical score.
2 Course Grades will be calculated by aggregating the weighted result or numerical score for each summative assessment item.
3 All assessment items must be submitted and passed overall.
4 If assignments are submitted after the due date without an approved extension of time, University penalties may be applied.
