Academic Group: FOENS
Academic Org: FOES04
HECS Band: 2
ASCED Code: 031307

STAFFING
Examiner: Jim Ball
Moderator: Nigel Hancock

PRE-REQUISITES
Pre-requisite: MAT1102 and ELE2103 and ELE2601 Co-requisite: MAT2100

OTHER-REQUISITES
Pre-requisite: 64612+70320+E2005 Co-requisite: 64613

SYNOPSIS
It is a common requirement of an electrical engineer to convey electrical energy from one place to another, whether for the purpose of power or information transport. A pair of conductors used for this purpose constitute a transmission line, and for any appreciable distance a.c. voltages and currents on the line must be regarded as a travelling wave - whether from a power station, in a radio receiver, or across a digital circuit board. The electric and magnetic fields associated with voltage and currents may be similarly propagated as a travelling wave; such fields also constitute the basis of electrical machines and are the cause of much unwanted interference. Therefore, an understanding of both wave propagation and electro- magnetic fields is essential in all branches of electrical engineering.

OBJECTIVES
On completion of this course, students should be able to:

- identify situations in which it is appropriate to use transmission line theory;
- solve problems in transmission line theory;
- design simple transmission line matching networks;
- solve static field problems numerically;
- deduce the properties of guided electromagnetic waves from Maxwells equations;
- solve simple electromagnetic field problems analytically.

circuits.

2. Electromagnetic Theory 25.00

2.1. Overview of electromagnetism.

2.2. Fields and the visualisation of flux, div. and curl.

2.3. The Electrostatic Field.

2.4. Coulomb's Law.

2.5. Electric flux density and Gauss' Law.

2.6. Potential.

2.7. Laplace's Equation and two dimensional solution, numerical methods.

2.8. Capacitance.

2.9. Current.

2.10. Resistivity and resistance of materials.

2.11. The Magnetostatic Field; Ampere's Law.

3. Electromagnetic Waves

3.1. Derivation from Maxwell's Equations.

3.2. Velocity.

3.3. Impedance of free space.

3.4. Visualisation.

3.5. Energy density, power flow and the Poynting Vector.

3.6. Electromagnetic waves in conducting media.

3.7. Good conductors and the skin effect.

3.8. Wave impedance.

3.9. Guided electromagnetic waves.

3.10. Boundary conditions.

3.11. Waveguide propagation by superposition of reflected waves.

3.16. Impedances.

3.17. Evanescent fields.
TEXT and MATERIALS required to be PURCHASED or ACCESSED:

Books can be ordered by fax or telephone. For costs and further details use the 'Book Search' facility at http://bookshop.usq.edu.au by entering the author or title of the text.

(International Student Edition. Also a text for ELE4606 Communication Systems and ELE4608 High Frequency Engineering.)

REFERENCE MATERIALS

Reference materials are materials that, if accessed by students, may improve their knowledge and understanding of the material in the course and enrich their learning experience.

NOTES:

- Student Administration will advise students of the dates of their examinations during the semester.

IMPORTANT ASSESSMENT INFORMATION

1 Attendance requirements:

There are no attendance requirements for this course. However, it is the students' responsibility to study all material provided to them or required to be accessed by them to maximise their chance of meeting the objectives of the course and to be informed of course-related activities and administration.
2 Requirements for students to complete each assessment item satisfactorily:
   To complete each of the assessment items satisfactorily, students must obtain at
   least 50% of the marks available (or at least a grade of C-) for each assessment
   item.

3 Penalties for late submission of required work:
   If students submit assignments after the due date without prior approval then a
   penalty of 10% of the total marks available for the assignment will apply for each
   working day late.

4 Requirements for student to be awarded a passing grade in the course:
   (i) To be assured of a passing grade, students must demonstrate, via the summative
   assessment items, that they have achieved the required minimum standards in
   relation to the objectives of the course by satisfactorily completing all summative
   assessment items (the examination and assignments), as stated in 2 above. (ii)
   Students who do not qualify for a Passing grade may, at the discretion of the
   Examiner, be assigned additional work to demonstrate to the Examiner that they
   have achieved the required standard. It is expected that such students will have
   gained at least 45% of the total marks available for all summative assessment items.

5 Method used to combine assessment results to attain final grade:
   The final grades for students will be assigned on the basis of the weighted aggregate
   of the marks (or grades) obtained for each of the summative assessment items in
   the course.

6 Examination information:
   In a Closed Examination, candidates are allowed to bring only writing and drawing
   instruments into the examination.

7 Examination period when Deferred/Supplementary examinations will be held:
   Any Deferred or Supplementary examinations for this course will be held during
   the examination period at the end of the semester of the next offering of this course.

8 University Regulations:
   Students should read USQ Regulations 5.1 Definitions, 5.6. Assessment, and 5.10
   Academic Misconduct for further information and to avoid actions which might
   contravene University Regulations. These regulations can be found at the URL:
   http://www.usq.edu.au/SECARIAT/calendar/Part5/ or in the printed version of the
   current USQ Handbook.

**ASSESSMENT NOTES**

1 The due date for an assignment is the date by which a student must despatch the
   assignment to the USQ. The onus is on the student to provide proof of the despatch
   date, if requested by the Examiner.

2 Students must retain a copy of each item submitted for assessment. This must be
   produced within five days if required by the Examiner.

3 In accordance with University's Assignment Extension Policy (Regulation 5.6.1),
   the examiner of a course may grant an extension of the due date of an assignment
   in extenuating circumstances.

4 The Faculty will normally only accept assessments that have been written, typed
   or printed on paper-based media.
5 The Faculty will NOT accept submission of assignments by facsimile.

6 Students who do not have regular access to postal services or who are otherwise disadvantaged by these regulations may be given special consideration. They should contact the examiner of the course to negotiate such special arrangements.

7 In the event that a due date for an assignment falls on a local public holiday in their area, such as a Show holiday, the due date for the assignment will be the next day. Students are to note on the assignment cover the date of the public holiday for the Examiner's convenience.

8 Students who have undertaken all of the required assessments in a course but who have failed to meet some of the specified objectives of a course within the normally prescribed time may be awarded the temporary grade: IM (Incomplete - Make up). An IM grade will only be awarded when, in the opinion of the examiner, a student will be able to achieve the remaining objectives of the course after a period of non-directed personal study.

9 Students who, for medical, family/personal, or employment-related reasons, are unable to complete an assignment or to sit for an examination at the scheduled time may apply to defer an assessment in a course. Such a request must be accompanied by appropriate supporting documentation. One of the following temporary grades may be awarded IDS (Incomplete - Deferred Examination; IDM (Incomplete Deferred Make-up); IDB (Incomplete - Both Deferred Examination and Deferred Make-up).

10 The Faculty of Engineering and Surveying does not offer supplementary examinations.
