SYNOPSIS
While paper remains the most common medium for records, business transactions are increasingly being conducted using electronic media instead of paper. Electronic records need to provide the same degree of evidence of business activity and the same level of accountability as paper records for the immediate and future needs of organisations, individuals and society. Records management has become even more important for electronic documents than paper, because of their volatility and increasing significance to business. Electronic records management seeks to find the most effective means to create and capture electronic records, protect and manage them and make them accessible for as long as they are needed.

OBJECTIVES
On successful completion of this course students will be able to:

- analyse within the electronic environment the records and archives needs of an organisation to preserve the corporate memory;
- identify the roles and interrelationships between information professionals in the context of information, records and archives management;
- evaluate manual and automated records management systems;
- analyse traditional and emerging processes to manage all records created, received and processed in an organisation; and
- identify appropriate procedures and formulate policy to ensure that all records of continuing value are managed and preserved in an organisation.
