SYNOPSIS
Mass Media, Communication, and Public Relations research projects require variously a range of methods, both qualitative and quantitative. The researcher needs to be able to identify a research problem, decide on research objectives and select appropriate method/s to carry out the research. This course examines, from both practical and critical perspectives, a range of qualitative and quantitative research methods relevant to professional and academic needs in the mass communications field. These methods include focus groups, content and semiotic text analysis, in-depth interview and survey methods, as they are used in current research practices in the fields of Journalism, Film, Communication and Public Relations.

OBJECTIVES
On completion of this course students will be able to:

- identify and critically analyse a variety of communication research methods currently employed by researchers in relevant fields of interest;
- evaluate qualitative and quantitative research data, in the context of declared methodological frameworks
