RATIONALE
Students seeking careers as professional economists in both private and public sectors need an understanding of the policy advisory process and an ability to apply their knowledge of economics in the preparation of economic policy advice. These practical requirements of the professional economist are met in an integrative course that combines economic theory, applied analysis and policy-advising reality.

SYNOPSIS
This course focuses on the role and work of the professional economist in the development and presentation of economic policy advice. Apart from emphasising applied economic analysis, the course addresses issues associated with policy ideology and value judgements, the nature of decision-making in the Australian and other economies, the nature, extent and use of economic power and potential conflict among policy objectives. Students are required to complete and present a small policy dissertation.

OBJECTIVES
Successful completion of this course will enable students to be:
1. cognisant of theoretical public policy frameworks and capable of some critical analysis of those frameworks;
2. aware of interest groups germane to the public policy process and the role played by these groups;
3. informed about the essential tension between the methods and procedures of the economics discipline in particular and the policy process in general and be capable of bringing forward contributions and professional comment in a manner which facilitates the alleviation of that tension;
4. in possession of skills which allow a practical participation in the process of public policy formulation, implementation and evaluation;
5. knowledgeable about the policy process in private firms and the similarities, differences and contradictions between public policy and "private" policy;
6. capable of suggesting future directions in policy, and alternative practices that might improve the effectiveness of the policy process.
