REQUISITES

Pre-requisite: PSY8040 and PSY8050 and PSY8130

RATIONALE

To practice with a level of expertise required by a member of a specialist college, psychologists must be able to understand and critically apply general psychological models and practice to specific fields. This practicum builds on the generalist skills and knowledge acquired in Practicum 1. It is anticipated that students will be capable of more independent work at this stage in their training.

SYNOPSIS

This practicum course provides students with a structured situation in which to develop knowledge and skills within their chosen field of specialty. While the objectives are similar to Practicum 1, the level of independent practice and the application to specialist areas further challenges the student to broaden and diversify beyond their responsibilities in the first placement.

OBJECTIVES

On successful completion of this course students will be able to demonstrate competencies as indentified in the APS Competencies for Psychologists (1996): Framing, measuring and solving problems; Service implementation; Professional legal and ethical approach, communication; and Professional and community relations. The specific content of the Practicum will include skills as identified in the respective College Competency documents for Sport, Community, or Health Psychology. That is they will be able to:
• conduct a preliminary intake interview;
• formulate questions to guide further assessment and intervention;
• plan, conduct and evaluate assessment protocols;
• plan, conduct and evaluate intervention protocols;
• demonstrate a working knowledge of the role of psychological interventions within a multidisciplinary team;
• construct and present case reports in oral and written formats setting.
