Description: Object-Oriented Design with UML and Java

Subject | Cat-nbr | Class | Term | Mode | Units | Campus
--- | --- | --- | --- | --- | --- | ---
CSC | 8418 | 66283 | 2, 2007 | EXT | 1.00 | Toowoomba

Academic group: FOSCI
Academic org: FOS003
Student contribution band: 2
ASCED code: 020305

STAFFING
Examiner: Michael de Raadt
Moderator: Yan Li

OTHER REQUISITES
Recommended Pre-requisite: CSC2402 and CSC2407 and CSC8416

RATIONALE
As object-oriented techniques rapidly become the standard for systems development throughout the computing industry, development methodologies based on earlier structured programming techniques have been found to be inadequate. A number of modelling techniques that support the object-orient analysis and development paradigms have been published, and have been adopted by object developers worldwide. Students will be expected to gain a solid understanding of object-oriented modelling requirements and the principles in analysis, design and programming, and be able to appraise the suitability of methodologies and techniques for particular problem domains.

SYNOPSIS
This course introduces object-oriented methods for analysing a problem domain and creating an implementation independent formal representation of the system requirements, from which an object-oriented design of the system is then constructed. Issues involved in the process of transforming an OO analysis of a system into an OO design and implementation are studied in the context of a large software project in an application domain and implementation platform of the student's own choosing. Students will be provided with the knowledge and skill in the latest concepts in object-oriented analysis and object-oriented design, coupled with the most comprehensive OO modelling language and notation such as Unified Modelling language (UML), plus implementation with the Java programming language. Students will be given the opportunity to study the methodologies for applying these fundamental concepts through project work to develop a variety of distributed application systems.
OBJECTIVES

On completion of this course students will be able to:

1. demonstrate an understanding of several variations on the terminology, fundamental concepts and models for object-oriented software systems (Project Plan);
2. demonstrate the ability to apply the steps in OOA/OOD using a variety of approaches (Project Plan and Analysis Phase);
3. understand the elements of the Unified Modelling Language (UML) and how each element maps to a corresponding step or concept in the OO software development process (Analysis Phase);
4. understand how the Java language supports and has influenced OO and specific elements of modelling languages, as well as steps in the OO software development process (Analysis Phase and Project Design Phase);
5. take an OO software development process through iterative refinement steps using OOA/OOD methods, modelling languages and prototyping in Java (Project Design Phase and Project Software and Documentation);
6. apply the OOA/OOD/OOP techniques for building real-world software systems (Project Design Phase and Project Software and Documentation).

TEXT and MATERIALS required to be PURCHASED or ACCESSED

ALL textbooks and materials are available for purchase from USQ BOOKSHOP (unless otherwise stated). Orders may be placed via secure internet, free fax 1800642453, phone 07 46312742 (within Australia), or mail. Overseas students should fax +61 7 46311743, or phone +61 7 46312742. For costs, further details, and internet ordering, use the 'Textbook Search' facility at http://bookshop.usq.edu.au click 'Semester', then enter your 'Course Code' (no spaces).

REFERENCE MATERIALS

Reference materials are materials that, if accessed by students, may improve their knowledge and understanding of the material in the course and enrich their learning experience.

IMPORTANT ASSESSMENT INFORMATION

1. Attendance requirements:
   There are no attendance requirements for this course. However, it is the students’ responsibility to study all material provided to them or required to be accessed by them to maximise their chance of meeting the objectives of the course and to be informed of course-related activities and administration.

2. Requirements for students to complete each assessment item satisfactorily:
   To complete each of the assessment items satisfactorily, students must obtain at least 50% of the marks available for each assessment item.

3. Penalties for late submission of required work:
   If students submit assignments after the due date without prior approval then a penalty of 10% of the total marks available for the assignment will apply for each working day late.

4. Requirements for students to be awarded a passing grade in the course:
   To be assured of receiving a passing grade a student must achieve at least 50% of the total weighted marks available for the course.
5 Method used to combine assessment results to attain final grade:
   The final grades for students will be assigned on the basis of the aggregate of the weighted marks obtained for each of the summative assessment items in the course.

6 Examination information:
   There is no examination in this course.

7 Examination period when Deferred/Supplementary examinations will be held:
   There will be no Deferred or Supplementary examinations in this course.

8 University Regulations:
   Students should read USQ Regulations 5.1 Definitions, 5.6. Assessment, and 5.10 Academic Misconduct for further information and to avoid actions which might contravene University Regulations. These regulations can be found at the URL http://www.usq.edu.au/corporateservices/calendar/part5.htm or in the current USQ Handbook.

ASSESSMENT NOTES

9 The due date for an assignment is the date by which a student must despatch the assignment to the USQ. The onus is on the student to provide proof of the despatch date, if requested by the Examiner. If requested, students will be required to provide a copy of assignments submitted for assessment purposes. Such copies should be despatched to USQ within 24 hours of receipt of a request being made.

OTHER REQUIREMENTS

1 Students will be required to have access to a CASE tool for UML and Java software (available from http://java.sun.com/products/).
