Student contribution band: 2
ASCED code: 031303

STAFFING
Examiner: David Parsons
Moderator: Nigel Hancock

REQUISITES
Pre-requisite: ELE1502 and (ELE2101 or ELE2103) and (ELE2503 or ELE2504)

SYNOPSIS
Central to the profession of all electrical engineering professionals is the measurement of electrical quantities, or, more generally, physical quantities whose values have been rendered electrical by a transducer. Such measurements are almost invariably made with the aid of electronics, and increasingly by sophisticated instrumentation which provides multidimensional displays and analytical capabilities. Automation of such measurements is also on the rapid increase. However, in the face of these developments the need to comprehend the physical principles of making accurate, precise and trustworthy measurements, particularly of small quantities (microvolts, microamperes), remains fundamental. It is the task of the engineering professional to be able to specify and evaluate equipment for a given measurements task; this requires an appreciation of electronic measurement systems: at the system level by an awareness of the range, operating principles and limitations of commercial test equipment; and, at the circuit level which includes the effects and minimisation of interference, certain commonly employed circuit and IC configurations such as the Phase Lock Loop and frequency synthesis, and choice of components and construction details. An important aspect of the operating requirements of equipment is the need for them to be electromagnetically compatible. It is also the responsibility of professionals to implement measurement systems with regard to their human and environmental impact, and some introduction to these issues is also provided.

OBJECTIVES
On completion of this course, students should be able to:

1. discuss the operating principles of common electronic laboratory test equipment (Differential Thermometer, CMA 2 and Timed Assignment);
2. apply the principles of operation of common electronic measuring equipment, and to assess the limitations of that equipment (Differential Thermometer, CMA 2 and Timed Assignment);
3. measure the performance of electronic test equipment and electronic circuits (Differential Thermometer, CMA 1 and Timed Assignment);
4. design appropriate techniques for minimising signal interference (Amplifier Design, CMA 1 and Timed Assignment);
5. select and justify amplifiers appropriate to an application (Amplifier Design and Timed Assignment);
6. design, construct and evaluate electronic circuits for low-signal, high-interference environments (Amplifier Design, Differential Thermometer, CMA 1 and Timed Assignment);
7. analyse the performance of Phase Lock Loops and calculate their parameters (CMA 2 and Timed Assignment);
8. discuss the principles of reliability theory as applied to electronic systems, and calculate composite reliability and subsystem redundancy (Differential Thermometer, CMA 2 and Timed Assignment); and
9. discuss human and environmental implications of measurement systems (Amplifier Design and Timed Assignment).

TEXT and MATERIALS required to be PURCHASED or ACCESSED

ALL textbooks and materials are available for purchase from USQ BOOKSHOP (unless otherwise stated). Orders may be placed via secure internet, free fax 1800642453, phone 07 46312742 (within Australia), or mail. Overseas students should fax +61 7 46311743, or phone +61 7 46312742. For costs, further details, and internet ordering, use the 'Textbook Search' facility at http://bookshop.usq.edu.au click 'Semester', then enter your 'Course Code' (no spaces).

Electronic components and test equipment as specified in study materials.

Instrumentation Amplifier Kit

REFERENCE MATERIALS

Reference materials are materials that, if accessed by students, may improve their knowledge and understanding of the material in the course and enrich their learning experience.

NOTES
1. The timed assignment comprises a series of questions requiring either calculations or written answers. The questions are different for each student and will be provided to students a short time prior to the due date. Full details are provided in the study materials.

IMPORTANT ASSESSMENT INFORMATION

1. Attendance requirements:
   There are no attendance requirements for this course. However, it is the students' responsibility to study all material provided to them or required to be accessed by them to maximise their chance of meeting the objectives of the course and to be informed of course-related activities and administration.

2. Requirements for students to complete each assessment item satisfactorily:
   To satisfactorily complete an individual assessment item, a student must achieve at least 50% of the marks or a grade of at least C-.

3. Penalties for late submission of required work:
   If students submit assignments after the due date without prior approval then a penalty of 2% of the total marks available for the assignment will apply for each working day late.

4. Requirements for student to be awarded a passing grade in the course:
   To be assured of receiving a passing grade, a student must achieve at least 40% in each of the weighted assessment items and at least 50% of the total weighted marks available for the course.

5. Method used to combine assessment results to attain final grade:
   The final grades for students will be assigned on the basis of the weighted aggregate of the marks (or grades) obtained for each of the summative assessment items in the course.

6. Examination information:
   There is no examination in this course.
7 Examination period when Deferred/Supplementary examinations will be held:
There will be no Deferred or Supplementary examinations in this course.

8 University Regulations:
Students should read USQ Regulations 5.1 Definitions, 5.6. Assessment, and 5.10
Academic Misconduct for further information and to avoid actions which might contravene
University Regulations. These regulations can be found at the URL
http://www.usq.edu.au/corporateservices/calendar/part5.htm or in the current USQ
Handbook.

ASSESSMENT NOTES

1 The due date for an assignment is the date by which a student must despatch the assignment
to the USQ. The onus is on the student to provide proof of the despatch date, if requested
by the Examiner.

2 Students must retain a copy of each item submitted for assessment. This must be despatched
to USQ within 24 hours if required by the Examiner.

3 In accordance with University's Assignment Extension Policy (Regulation 5.6.1), the
examiner of a course may grant an extension of the due date of an assignment in extenuating
circumstances.

4 The Faculty will normally only accept assessments that have been written, typed or printed
on paper-based media.

5 The Faculty will NOT accept submission of assignments by facsimile.

6 Students who do not have regular access to postal services or who are otherwise
disadvantaged by these regulations may be given special consideration. They should
contact the examiner of the course to negotiate such special arrangements.

7 In the event that a due date for an assignment falls on a local public holiday in their area,
such as a Show holiday, the due date for the assignment will be the next day. Students are
to note on the assignment cover the date of the public holiday for the Examiner's
convenience.

8 Students who have undertaken all of the required assessments in a course but who have
failed to meet some of the specified objectives of a course within the normally prescribed
time may be awarded one of the temporary grades: IM (Incomplete - Make up), IS
(Incomplete - Supplementary Examination) or ISM (Incomplete -Supplementary
Examination and Make up). A temporary grade will only be awarded when, in the opinion
of the examiner, a student will be able to achieve the remaining objectives of the course
after a period of non directed personal study.

9 Students who, for medical, family/personal, or employment-related reasons, are unable
to complete an assignment or to sit for an examination at the scheduled time may apply
to defer an assessment in a course. Such a request must be accompanied by appropriate
supporting documentation. One of the following temporary grades may be awarded IDS
(Incomplete - Deferred Examination; IDM (Incomplete Deferred Make-up); IDB
(Incomplete - Both Deferred Examination and Deferred Make-up).

OTHER REQUIREMENTS

1 Students will require internet access to USQConnect for this course.

2 Students will require access to basic electronic manufacturing equipment for this course.
Full details are provided in the study materials.
