Graduate Diploma of Mathematics (GDMA) - GradDipMath

CRICOS code (International applicants): 031448M

This program is offered only to continuing students. No new admissions will be accepted. Students who are interested in this study area should consider the Graduate Diploma of Science.

Program aims
The program aims to provide an opportunity for graduates in programs other than Mathematics to gain skills in key areas of mathematics that relate to the needs of their profession or industry.

Program objectives
Successful completion of the program will enable graduates to:

- acquire specific knowledge and skills in mathematics which are relevant to their disciplines and careers
- become better problem solvers and innovative thinkers and thus be able to contribute at a higher level to their professional environment
- understand the meaning and basis of fundamental mathematical ideas and techniques
- demonstrate the ability to model real-life scenarios in order to enable mathematical analysis
- demonstrate the ability to apply mathematics to the solution of problems in a variety of situations.

Admission requirements
To be eligible for admission, applicants must satisfy the following requirements:

- hold a bachelor's degree or a three-year diploma in a non-Mathematics discipline from an Australian university; OR
- hold a degree from a recognised university in a non-Mathematics discipline; OR
- have an approved qualification at least equivalent of the above.

Note: Applicants whose degree or equivalent qualifications include a major in mathematics or statistics will not normally be eligible for admission. In such instances, a case for admission will need to be made to the Head of Department.

All students are required to satisfy the applicable English language requirements.
If students do not meet the English language requirements they may apply to study a University-approved English language program. On successful completion of the English language program, students may be admitted to an award program.

**Program fees**

**Commonwealth supported place**
A Commonwealth supported place is where the Australian Government makes a contribution towards the cost of a students’ higher education and students pay a student contribution amount, which varies depending on the courses undertaken. Students are able to calculate the fees for a particular course via the Course Fee Finder.

Commonwealth Supported students may be eligible to defer their fees through a Government loan called HECS-HELP.

**Domestic full fee paying place**
Domestic full fee paying places are funded entirely through the full fees paid by the student. Full fees vary depending on the courses that are taken. Students are able to calculate the fees for a particular course via the Course Fee Finder.

Domestic full fee paying students may be eligible to defer their fees through a Government loan called FEE-HELP provided they meet the residency and citizenship requirements.

Australian citizens, Permanent Humanitarian Visa holders, Permanent Resident visa holders and New Zealand citizens who will be resident outside Australia for the duration of their program pay full tuition fees and are not eligible for FEE-HELP.

**International full fee paying place**
International students pay full fees. Full fees vary depending on the courses that are taken and whether they are studied on-campus, via distance education/online. Students are able to calculate the fees for a particular course via the Course Fee Finder.

**Program structure**
The program consists of eight units of study. The courses studied will depend on the student’s background in mathematics but at least five will be courses from the Mathematics and Statistics major of the Bachelor of Science.

Students must complete any eight courses from the following table, provided that at least two Level 3 courses are completed and at least five courses are from the Mathematics and Statistics major of the Bachelor of Science.

Footnotes
^ This course is part of the Mathematics and Statistics major of the Bachelor of Science.
# Available in even-numbered years.
* Available in odd-numbered years.

Required time limits
Students have a maximum of 3 years to complete this program.

IT requirements
Students should visit the USQ minimum computing standards to check that their computers are capable of running the appropriate software and versions of Internet web browsers and to check the minimum and recommended standards for software.

Enrolment
Enrolment patterns will need to be determined for individual students. On acceptance into the program, students must submit an enrolment pattern for approval to the Faculty of Health, Engineering and Sciences. Pre-requisite courses should be taken as a guide to the assumed knowledge required for a course. It is the student's responsibility to ensure that they have the assumed knowledge before enrolling in a particular course.

Recommended enrolment pattern
Students are able to enrol in any offered mode of a course (on-campus, external or online), regardless of the program mode of study they enrolled in.
There is no recommended enrolment pattern for this program. Students should select their own. If unsure about a suitable enrolment pattern, students should contact the Faculty of Health, Engineering and Sciences.
